

Security Software Development: Assessing and Managing Security Risks

Threats to application security continue to evolve just as quickly as the systems that protect against cyber-threats. In many instances, traditional firewalls and other conventional controls can no longer get the job done. The latest line of defense is to build security features into software as it is being developed. Drawing from the authors extensive experience as a developer, *Secure Software Development: Assessing and Managing Security Risks* illustrates how software application security can be best, and most cost-effectively, achieved when developers monitor and regulate risks early on, integrating assessment and management into the development life cycle. This book identifies the two primary reasons for inadequate security safeguards: Development teams are not sufficiently trained to identify risks; and developers falsely believe that pre-existing perimeter security controls are adequate to protect newer software. Examining current trends, as well as problems that have plagued software security for more than a decade, this useful guide:

- Outlines and compares various techniques to assess, identify, and manage security risks and vulnerabilities, with step-by-step instruction on how to execute each approach
- Explains the fundamental terms related to the security process
- Elaborates on the pros and cons of each method, phase by phase, to help readers select the one that best suits their needs

Despite decades of extraordinary growth in software development, many open-source, government, regulatory, and industry organizations have been slow to adopt new application safety controls, hesitant to take on the added expense. This book improves understanding of the security environment and the need for safety measures. It shows readers how to analyze relevant threats to their applications and then implement time- and money-saving techniques to safeguard

Coupons Newsletter Unsubscribe All my gourd creations are original, handcrafted, signed and dated. ½ No
stencils or patterns are ever used. ½ Every birdhouse is treated with several coats of high quality exterior varnish
for protection from the elements and to ensure colors will stay bright throughout the seasons. Birds love gourds for
nesting and will often return to the same one year after year. ½ When nesting season ends, the gourd's usefulness
doesn't end. ½ Birds will continue to use them as shelter from weather and for protection from predators.
If you don't see what you want, please contact me for a custom made gourd creation or inquire about other types
of artwork...anything from pet portraits to painted milkcans! Enjoy your visit! New Products For July Pair of
